

JACKET SPECIFICATIONS

1. PATTERNS

Jacket patterns must be adjusted personally to each student's measured chest, waist, back waist length and sleeve length. Standard chart sizing is UNACCEPTABLE.

2. LINING

The jacket must be fully lined, including the sleeves, with the highest quality polyester twill; non-toxic, perspiration resistant, color fast, and non-shrinkable.

The lining is completely sewn around the armholes, NOT just tacked. Any seams which incorporate a layer of sequin fabric must be sandwich bound with matching 50/50 Polyester/Cotton blend Broadcloth bias binding for added strength and wearer's comfort. Exposed edges of sequin fabric, which may come in contact with the wearer's skin, are NOT ACCEPTABLE.

3. ZIPPER

Medium-weight separating polyester zipper must be sewn securely through the turned back edges of both lining and outer shell fabric.

4. SEQUIN DESIGNS

Sequin designs on the garment must be fitted to each size. The sequins must be sewn onto it's background fabric (glued-on sequins not acceptable). The design will be secured on the edges with a single row of zigzag stitching when edged with two-row or wider matching or contrasting color sequin trim and this trim must be stitched down on each side. If narrower sequin edge trim is used, the sequin fabric design must be secured with two rows of zigzag stitching.

(FOR lined jacket of gabardine or lined jacket of light to medium weight lycra super-stretch jackets are unlined)
